OVERFILE STORAGE CABINETS

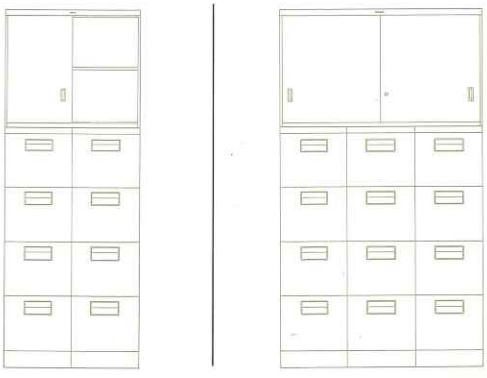
BY STEELCASE

Models for letter-and legal-size Steelcase files of any drawer height!

Place your new 751 Series Overfile cabinets atop a bank of freestanding files, or use them as attractive built-ins over recessed filing cabinets. The Overfile unit is expertly engineered and constructed to remain rigid and stable.

Conventional storage, too!

751 cabinets can also be used on top of tables, desks or on the floor . . . wherever extra storage is needed.



Three-quarter height model No. 751-442 for use atop two letter-size filing cabinets, and No. 751-742 for three letter-size files. Each is 25⅝" high and has one adjustable shelf. Overfiles cannot wobble or shift out of alignment.

Now—make profitable use of the wasted space above your filing cabinets!

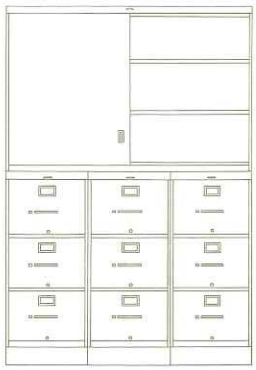
Problem: Non-current records stacked in a dusty corner of a storeroom become wrinkled—disorganized—lost. *Problem:* Thick, heavy reference books consume valuable bookshelf space—and their appearance is often unsightly. *Problem:* Lack of adequate storage space forces you to stock supplies and business forms in a location inconvenient for everyone. The Steelcase solution: Top-of-the-file storage cabinets—a convenient extension of your present filing storage system!

New 751 Series Overfile cabinets are designed to fit on top of your Steelcase files, providing auxiliary storage where it's most needed. Constructed with the style and durability of the filing cabinets themselves, 751 Series units are made in sizes to fit over both letter- and legal-size files. There are two heights. The full-height cabinet is equipped with two adjustable shelves; the three-quarter height unit has one. Full-height and three-quarter height units can be placed in combination over files of varying heights (such as a group consisting of two three-drawer and two four-drawer files) to provide an installation with an even top-of-cabinet height.

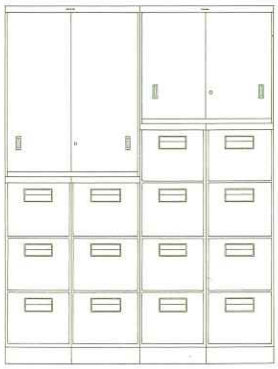
Sliding doors are standard on the 751 Series, but open-shelf styling is available. Locks that are virtually manipulation-proof are available as optional equipment.

Here's what Steelcase Overfile cabinets offer you:

- **Protective storage.** Material stays cleaner, remains in good condition and is less apt to be misplaced.
- **Organized storage.** Everything can be neatly filed, labeled and placed in easy-to-locate order.
- **Convenient storage.** Records and forms will be nearby: available when you need them—out of sight when you don't!
- **Attractive storage.** Trim cabinet lines complement your Steelcase files and you can choose from 23 acrylic color finishes to match or accent your filing cabinets and office decor.
- **Bonus storage.** With today's high cost of office space, the 751 Series provides you with bonus storage, putting otherwise wasted space to efficient practical use.

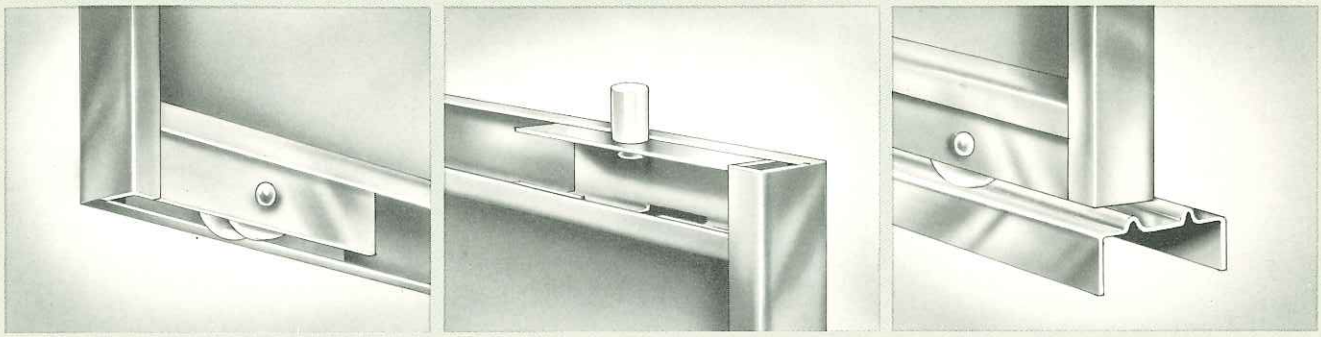


Full-height model No. 751-552 for use with two legal-size filing cabinets, and No. 751-952 for three legal-size files. Each 751 Series full-height unit is 36-¾" high and is equipped with two shelves adjustable every one inch for storage of papers and records of almost any height.

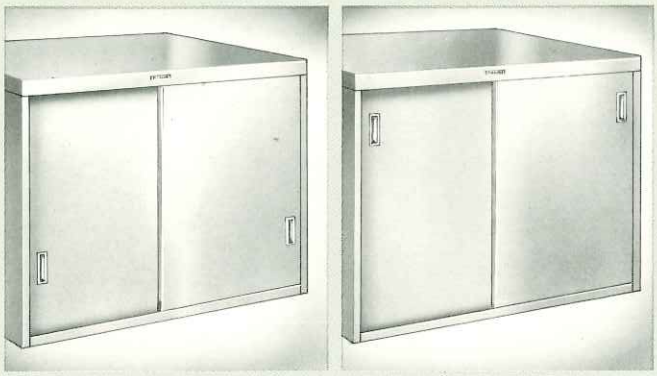


Full-height model No. 751-452 atop two three-drawer letter-size cabinets next to three-quarter-height model No. 751-442 atop two four-drawer letter-size cabinets. Maintains even, top-of-cabinet height.

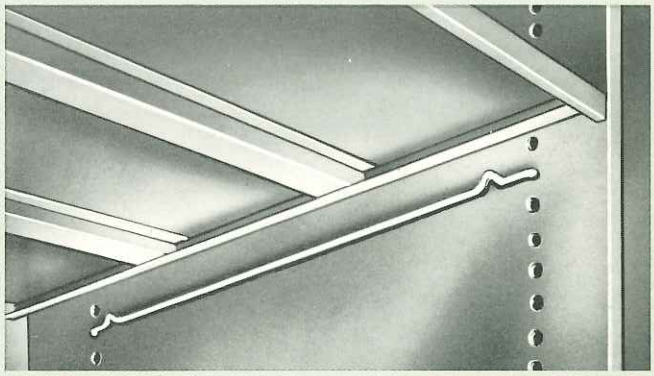
751 Overfiles operate so well—last so long—because of features such as these:



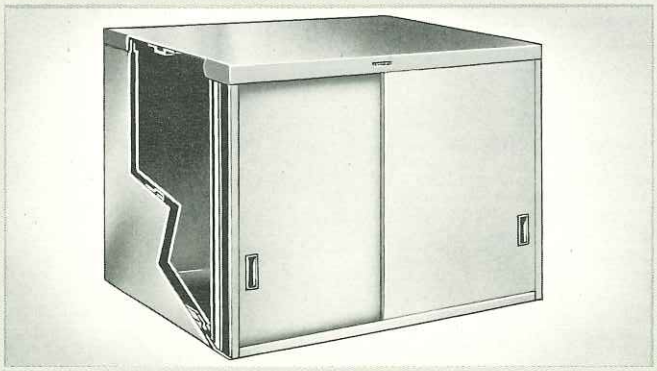
Smooth operation. Nylon makes the difference in easy door operation and long life! Two nylon rollers are installed in the bottom of each door and two nylon-covered steel pegs are mounted in the top. All door track channels are of top quality zinc-plated steel for a smooth, long-wearing surface. At the touch of a finger, doors slide smoothly, quietly, without annoying sideplay.



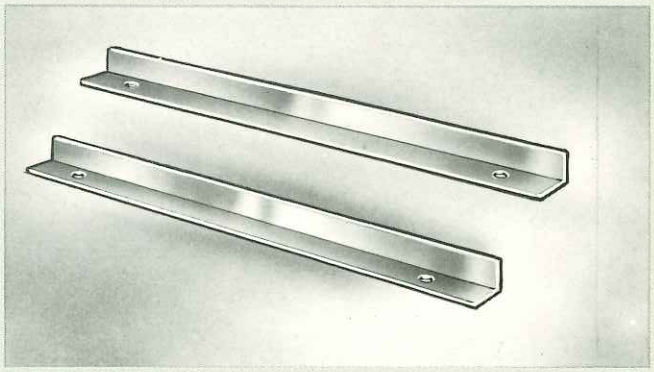
The switchables! Want door pulls at the top when Overfiles are used with 2- or 3-drawer files? Just turn doors upside down! Lift them out, loosen prongs to release pegs and rollers. Transfer pegs to what is now the door top, snap rollers into bottom. (Pegs must *always* be in door top.)



Adjustable shelf. Each shelf is supported by two steel rod flanges which snap in and out of pre-drilled holes for fast and easy shelf adjustment. Holes are spaced on 1″ centers enabling you to place shelves at any height. Full-height files have two shelves; three-quarter Overfiles have one.



Double-wall construction. Case walls of Overfiles are built with two thicknesses of steel, reinforced at points of stress. Superior construction for added years of service!



Attaching angles. Steelcase 751 Series Overfiles attach firmly to regular Steelcase files in perfect alignment. Cabinets cannot slip or be accidentally pushed out of position.

751 Overfile Storage Cabinet Specifications
